K.C.S.E. BIOLOGY PAPER 231/2 2006

SECTION A (40 marks)

Answer ALL the questions in this section in the spaces provided.

I The diagram below represents bones at a joint found in the hind limb of a mammal.

(a)	Name	the bones labelled X, Y and Z.	(3 marks)
	X	7#####################################	
	Y	324444444444444444444444444444444444444	
	Z	2*************************************	***************************************
(b)	(i)	Name the substance found in the place labelled W.	(I murk)

	(ii)	State the function of the substance named in (b) (i) above.	(1 mark)
ų.		***************************************	
(c)	Name	the structure that joins the bones together at the joint.	(I mark)

(d)-	State the difference between ball and socket joint and the one illustrated above.		in the diagram (I mark)
(e)	Name	e the structure at the elbow that performs the same function as the p	atella. (1 mark)

Answer question 6 (compulsory) in the spaces provided and either question 7 or 8 in the spaces provided after question 8.

An experiment was carried out to investigate the effect of hormones on growth of lateral buds 6 of three pea plants.

The shoots were treated as follows:

Shoot A - Apical bud was removed.

Shoot B - Apical bud was removed and gibberellic acid placed on the cut shoot.

Shoot C - Apical bud was left intact.

The lengths of the branches developing from the lateral buds were determined at regular intervals.

The results obtained are shown in the table below.

Time in days	Length of branches in millimetres			
	Shoot A	Shoot B	Shoot C	
0	3	3	3	
2	10	12	3	
4	28	48	8	
6	50	90	14	
B	80	120	20	
10	118	152	26	

Using the same axes, draw graphs to show the lengths of branches against time. (a) (8 marks)

	(b)	(i) What was the length of the branch in shoot B on	the 7th day? (1 mark)	(I mark)	
		(ii) What would be the expected length of the branch the (1th day?	n developing from shoot A on (1 mark)		
	(c) co	(ii) What was the registror the change of the branch the 11th day?	(6 marks)
